Education

Netaji Subhas University Of Technology

Bachelor of Technology in Electronics and Communication Engineering

August 2021 - June 2025

New Delhi, India

Janki Devi S.K.V School

Higher Secondary School

March 2019 - April 2020

New Delhi, India

Experience

Amdocs

Backend Developer

June 2025 – Present

Gurugram, India

- **Improved** performance of a latency-critical backend API, achieving a **90%** reduction in response time (2.3s to 200ms) and better load resilience.
- **Implemented** AI - SDLC framework on **BMAD** method, delivering **14** Cursor wrapper agents with Atlassian **MCP** integration to automate planning to production workflows and standardize **brownfield delivery** across teams.
- **Built** a backend ingestion and preprocessing layer to feed error-report attachments into an AI system for automated error detection and fixing, reducing resolution effort by **50%**.
- **Developed** Grafana dashboards for API latency monitoring, ensuring sustained low-latency performance under production load.

BharatPe

Backend Developer Intern

Jan 2025 - June 2025

Gurugram, India

- **Implemented** a merchant unblock service that surfaced the top 3 rule-relevant transactions on the unblock workflow, increasing merchant document uploads by **40%** and improving unblock approval success rates
- **Designed** and enforced a Maker-Checker approval workflow for merchant document verification in the CRM, introducing multi-level validation and reducing incorrect approvals by **32%**
- **Enhanced** document verification workflows by attaching rule context and rule-specific documents directly in the CRM, eliminating Excel-based lookups and reducing manual verification time by **35%**.

Projects

BugLens

- Built a Code Debugger application that detects the exact line causing an error, categorizes faults, and generates automated code suggestions.
- Integrated **Gemini API** to analyze submitted code, identify the exact error line, categorize fault types, and return automated fix suggestions.
- Implemented **Spring Boot** for error detection and designed an interactive interface using React to have a smooth debugging experience .

EventHive

- Developed a scalable event booking backend that enables event creation, real-time ticket booking with concurrency control, and asynchronous notifications using an event-driven architecture.
- Designed and implemented a microservices-based backend using **Spring Boot**, separating concerns across Authentication, Event Management, Booking, Notification, and Analytics service.
- Leveraged **Redis** for high-performance caching and booking locks, while using **MySQL** to maintain consistent and reliable event and booking data.
- Integrated **Kafka** to enable asynchronous event-driven communication for booking confirmations, event publishing, notifications, and analytics processing.

Technical Skills

Technologies: Java, SpringBoot, Redis, Kafka, REST APIs, MongoDB, MySQL, Python, React

Soft Skills: Client Communication, Cross functional Collaboration, Rapid Prototyping , Problem decomposition

Tools: Github, Copilot, Cursor, Coralogix, Jenkins, Gemini, PagerDuty

Concepts: Git, OOP, System Design, SOLID, Junit, Hibernate, Microservices

Achievements

- Solved 500+ problems of Data Structure and Algorithms.
- Built and demoed a working prototype at **Vihaan Hackathon**, placing runner-up among 100+ teams.
- Ranked within the top 5% in LeetCode Biweekly Contest among 10,000+ global participants.
